

IEPrep

Differentiated lesson planning & IEP tracking for special education teachers

Plan once. Differentiate for every learner. Walk into class with slides ready.

Powered by Claude · AI for Education Hackathon

Special-ed teachers spend nights rebuilding the same lesson for every learner

One class, many levels

A single 8th-grade room may hold readers at a 3rd-grade level and a 6th-grade level, across 5+ disability categories — all needing the same standard taught differently.

IEP paperwork never stops

Goals, accommodations, and trial-by-trial progress data must be tracked for every student and woven into daily instruction.

Hours lost to busywork

Teachers hand-build lesson plans, then rebuild them again as Smart Board slides — time that should go to students.

THE COST

7+ hrs

planning per week, much of it differentiation & slides

5-7

disability categories in one inclusion classroom

1 plan

expected to reach every learner, every day

IEPrep turns one standard into a full week of differentiated, ready-to-teach instruction

Differentiated lesson plans

Pick up to 4 Virginia SOLs and up to 10 disability categories. AI spirals the standards across daily sessions, tailored to each learner.

Smart Board slide decks

Every day's plan becomes a classroom-ready deck: hooks, 'I Can' targets, WICOR agenda, interactive quizzes, exit tickets — in 5 visual themes.

IEP goal tracking

Log trial data (1/4 → 4/4), watch progress levels, and get AI instructional recommendations grounded in each student's trend.

Built around classes

Create a class, add students once, and generate a single cohesive lesson that differentiates for the whole room.

Claude is the lesson designer — not a chatbot bolted on

Three purpose-built AI engines, each given the full teaching context — standards, disabilities, accommodations, and live IEP data.

Lesson designer

Receives the SOLs, every disability category, accommodations, and student notes — then spirals standards into day-by-day sessions with tiered activities. Streamed live with adaptive reasoning.

Slide author

Re-reads a single day and re-imagines it as a classroom deck — choosing the right slide type (hook, quiz, exit ticket) and writing student-facing language 1-2 grades below level.

Progress analyst

Reads each IEP goal's trial trend and returns specific instructional moves, focus areas, and a parent-communication note — turning raw data into next steps.

The 'last mile' of AI lesson planning

Most AI tools stop at a text plan. IEPrep follows the teacher all the way to the Smart Board.

Typical AI planner

- ✗ One generic plan as a wall of text
- ✗ Ignores specific disabilities & IEP goals
- ✗ Teacher still builds slides by hand
- ✗ No record of student progress

IEPrep

- ✓ Spirals multiple standards across a week
- ✓ Differentiates per disability & live IEP data
- ✓ Auto-builds themed Smart Board decks
- ✓ Tracks trials and recommends next steps

A five-step walkthrough

From an empty screen to a class-ready slide deck in minutes.

1

Build a class

Create '8th Grade ELA', add students with their disability, reading level & accommodations.

2

Load for a lesson

One click pulls the whole roster into the generator — grade, standards focus, every accommodation.

3

Pick SOLs & generate

Choose up to 4 Virginia SOLs. Claude streams a differentiated unit broken into daily sessions.

4

Make a day's slides

Click any day → a themed Smart Board deck appears: hook, targets, quiz, exit ticket.

5

Track the goals

Log trial data on the Goal Tracker and get AI recommendations for what to teach next.

► Demo tip: open the deck, then use the 🎨 palette to switch between 5 classroom themes live.

Who it helps

Teachers

Reclaims hours every week and removes the hardest part of the job — differentiating for everyone at once. Less burnout, more teaching.

Students

Each learner meets the same grade-level standard through instruction pitched at their level, with their accommodations built in.

Schools & districts

More consistent IEP compliance, documented progress data, and a repeatable way to support inclusion classrooms at scale.

Special education is where differentiation matters most — and where teachers have the least time to do it. IEPrep gives that time back.

Where it could go

Persistent accounts

Cloud sync of classes, goals & plans across devices (Supabase) so data follows the teacher.

Smart reminders

Email nudges when an IEP goal's target date approaches or progress stalls.

More standards

Authentic Virginia SOL codes today; any state's standards and grade bands next.

Progress reports

One-click parent & IEP-meeting summaries generated from logged trial data.

Richer slides

Embedded timers, videos and printable student handouts straight from a day's deck.

Co-teaching

Shared classes so general-ed and special-ed teachers plan together.

WHY IT SCORES

Built for the rubric — and for real classrooms

25

Impact & Relevance

Gives overworked special-ed teachers hours back and reaches every learner at their level.

25

Innovation & Creativity

AI follows the teacher to the 'last mile' — past the plan, into themed Smart Board decks.

20

Functionality & Demo

End-to-end working app: classes → differentiated plan → per-day slides → goal tracking.

15

User Experience

One warm, intuitive 'Garden Grove' interface; load a class and present in a few clicks.

15

Presentation Quality

A clear story: problem → AI solution → live demo → impact, mirrored in this deck.

Plant the standard. Grow every learner.

IEPrep — differentiated lessons, slides & IEP tracking, powered by Claude.

Thank you · Live demo ready
